

There are now over 100 million blogs in existence. The vast majority are of a personal nature but major corporations are increasingly making use of this exciting medium to promote themselves, to communicate with clients, employees and other stakeholders, and to increase their overall visibility on the internet through increased search engine exposure.

Very few SME's are taking advantage of this major opportunity and NetSecrets' Managed Blog service is intended to provide all the benefits of an effective blog at an affordable price. SME's no longer need to miss out!

#### 1.0 Software

We have selected TypePad as our preferred blogging software. It produces great looking blogs, can be fully customised to match the corporate style of the client's main web site, is very easy to use yet fully secure, and has advanced tools for building links to other blogs and gaining high search engine visibility.

#### 2.0 Domain Names and Domain Mapping

To get maximum benefit in search engine visibility for your blog it is important that it is on a different domain to your main website. So you should not use [blog.mydomain.co.uk](http://blog.mydomain.co.uk) or [www.mydomain.co.uk/blog/](http://www.mydomain.co.uk/blog/) but rather [www.mydomain-blog.co.uk](http://www.mydomain-blog.co.uk). Our managed service includes provision of a suitable domain which will be mapped to your blog.

#### 3.0 Customised Design

It is important that the graphic design of your blog matches the graphic design of your main website for consistency of branding. NetSecrets will provide a custom header and other matching elements for your blog to ensure a consistent image across your online resources.

#### 4.0 Configuration Of Your Blog

TypePad has an impressive array of options for the configuration of your blog but, without extensive study, the range of choices can be bewildering. NetSecrets will go through key options with you, such as security settings, menu layouts, archiving options, typelists, etc. to ensure your blog is effective from day one in attracting visitors and providing them with a worthwhile experience.

#### 5.0 Search Engine Marketing

Although the well known search engines, such as Google and Yahoo, index blogs there is almost a "parallel universe" of specialised resources for blogs, such as Technorati, del.icio.us, Digg, FeedBurner, and many more. NetSecrets will aggressively promote your blog in all appropriate media to bring traffic to your blog and also to benefit the rankings of your main web site.

#### 6.0 Blog Content

In most cases we anticipate the client will provide the posts for the blog but if you need assistance in producing content we can recommend copywriters experienced in producing news items and case studies for use both in blogs and on web sites.

#### 7.0 Additional Training

NetSecrets will ensure that the client understands how to create posts to the blog and how to respond to comments. In most cases, due to the ease of use of TypePad, this will be sufficient to run the blog effectively. Where more in depth training is needed we can refer you to experienced IT trainers who can provide one-to-one or classroom sessions for the client's team.

#### 8.0 Ongoing Support & Promotion

To ensure that the blog meets its objectives we offer an ongoing support and promotion service to monitor its effectiveness, identify improvements to your use of the blog, introduce new features, continue search promotion, and provide telephone and email response to user queries.
